

HALLINGTON 'FLY' LIFE (2012-2016) Compiled by Phil Bilbrough from trout autopsies and general observations, April 2017

FLIES/WEEK	APRIL				MAY				JUNE				JULY				AUGUST				SEPTEMBER				OCTOBER			
	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4
MIDGES(ADULT, PUPA, SHUCK)	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
COW DUNG FLY			X														X											
TERRESTRIAL BEETLES	X		X	X	X		X	X	X	X	X			X	X		X	X	X	X	X		X		X	X	X	
APHIDS							X		X			X	X	X		X			X			X		X				X
SEDGE FLIES/PUPAE							X	X	X	X				X		X	X		X		X				X			
SEDGE (CADDIS) LARVAE	X	X	X	X				X	X																			
COARSE FISH FRY														X			X											
CRANE FLY						X		X										X	X	X							X	
MAYFLY									X	X																		
CAENIS													X															
HEATHER FLY																		X						X				
BLACK GNAT				X	X	X		X											X		X	X	X					
DAMSEL ADULT																		X										
DAMSEL NYMPH																												X
WASP																												X
BEE												X													X			X
HAWTHORN FLY					X	X		X																				
SMALL TERRESTRIAL FLIES		X	X	X	X		X	X	X	X	X	X	X	X			X	X	X		X		X					
DAPHNIA	X		X	X	X							X																X
BLOODWORM			X											X					X									X
SNAILS	X			X		X		X					X						X						X			
MONEY SPIDERS													X													X	X	
BLUE-BOTTLES																		X								X	X	
ALDER FLY																												
SHRIMP																				X								
CORIXA								X																		X		
STONEFLY			X					X											X	X								
SMALL UPWINGS	X													X			X											

This table is very much 'work in progress'. Some insects are under-reported for example Mayfly, Damselflies and Caenis. Alder flies have not been recorded but I would expect to see them during May. Version 1, April 2017
